

CrossRoads **Construction**

We can't say enough about the quality we offer compared to other half-ton towables in our class. Often we hear stories about consumers preferring our quality (and price) to others because we offer greater durability and product satisfaction in the short-term and long-term. With proper care, our products retain marketable value, and do not quickly show the signs of wear and mileage.

Contributing to our product durability is:

1. Lightweight all-aluminum construction that gives you more towing options.
2. One-piece, seamless, walk-on rubber roof that offers durability and extra resistance to leaks.
3. Plywood roof and floor decking that resists moisture degradation common with OSB construction.
4. Smooth fiberglass exterior for easy maintenance.
5. Hung aluminum sidewalls, endwalls and slides for overall solid construction.
